

SAANVISH GEO RESOURCES

CLIENT PORTFOLIO & PROJECT EXPERIENCE

Geological Exploration | Mineral Resource Evaluation | Drilling & Mining Consultancy

Saanvish Geo Resources provides geological exploration and consultancy services for mineral exploration and mining projects. Our project experience spans copper, manganese, gold and industrial minerals, with technical activities covering geological mapping, drilling supervision, logging, sampling, QA/QC, mineralization interpretation, resource evaluation and mining support.

CLIENTS & PROJECT EXPERIENCE

1. Imaviz Mining Lda

Location: Uíge Province, Angola | **Commodity:** Manganese

Geological exploration and mining-related technical work involving field investigations, drilling activities, geological data collection and mineral resource evaluation.

- Geological exploration and detailed mapping.
- Exploration drilling coordination and supervision.
- Geological and lithological logging, mineralization assessment and sampling.
- Quality Assurance and Quality Control (QA/QC) and exploration data review.
- Resource and reserve estimation support, with reference to applicable JORC requirements where appropriate.
- Technical support for reserve assessment and mining operations.

Project status: Project experience

2. Minedge Global Pvt. Ltd.

Location: Bengaluru, India | **End client:** Maaden Mauritanie | **Country:** Mauritania

A geological consultancy assignment for reconnaissance-level exploration of gold and halite prospects in Mauritania, undertaken through Minedge Global Pvt. Ltd. for its end client, Maaden Mauritanie.

- 15-day reconnaissance assignment under a signed Memorandum of Understanding (MOU).
- Field traverses, preliminary geological mapping and GPS-based location recording.
- Identification of geological features and alteration indicators relevant to mineral exploration.
- Surface sampling coordination, documentation and preliminary data interpretation.
- GIS-based data compilation and recommendations for follow-up exploration.

Project status: MOU signed; reconnaissance assignment

3. Maaden Mauritanie (End Client)

Project area: Nouakchott Region, Mauritania | **Commodities:** Gold and halite

The end-client project associated with the reconnaissance assignment conducted through Minedge Global Pvt. Ltd., focusing on preliminary geological investigation and mineral prospectivity assessment.

- Reconnaissance of selected exploration blocks and field traverses.
- Examination of host rocks, lithological contacts, structures and alteration zones.
- Preliminary assessment of geological indicators relevant to gold and halite exploration.
- Sample location documentation, GPS/GIS data management and analytical data compilation.
- Preparation of field observations, maps and recommendations for additional exploration.

Project status: End-client engagement through Minedge Global Pvt. Ltd.

4. Copper Exploration Project

Location: Namibe Province, Angola | **Commodity:** Copper

Ongoing geological consultancy work focused on delineating and evaluating copper mineralization through systematic mapping, exploration drilling and interpretation of geological data.

- Detailed geological mapping and interpretation of copper-bearing formations.
- Delineation of mineralized zones and assessment of strike, width, depth and continuity.
- Drilling coordination, field supervision and borehole logging.
- Lithological recording, mineralized-interval identification and systematic sampling.
- Review of laboratory assay results and QA/QC monitoring.
- Geological sections, drill-hole interpretation and support for resource/reserve evaluation.
- Technical recommendations for further drilling and exploration development.

Project status: Under progress

CORE TECHNICAL CAPABILITIES

Geological reconnaissance and mapping • Copper, manganese, gold and industrial mineral exploration • Drilling supervision and geological logging • Sampling and assay interpretation • QA/QC and database review • GIS mapping and geological sections • Mineralization delineation • Resource and reserve estimation support • Technical reporting and mining geology support

OUR COMMITMENT

We aim to deliver systematic geological investigations, reliable exploration data and practical technical recommendations that support informed mineral exploration and mining decisions. Client logos and project details should be published only with the relevant permissions.
